Executive Summary

Duration	Default interface	Mac IPv4	Default gateway	DNS	Port scan enabled
481 seconds	en0	192.168.0.201	192.168.0.1	192.168.0.1	True

Discovered Device Inventory

IP addresses	Hostnames	MAC addresses	Interface	Reachability	Ping	Gateway	Likely device	Open TCP services	Notes
192.168.0.1			en0	ICMP reply	0.764	true	Router / default gateway	53/DNS; 80/HTTP; 443/HTTPS	Configured as the default gateway on this Mac.
192.168.0.2			en0	ICMP reply	0.628	false	Synology NAS or DSM web device (likely)	22/SSH; 80/HTTP; 139/NetBIOS; 443/HTTPS; 445/SMB; 5000/Synology DSM HTTP / Web service; 5001/Synology DSM HTTPS; 6690/Synology Drive	
192.168.0.118			en0	ICMP reply	2.175	false	Unknown network device		
192.168.0.135			en0	Detected		false	Unknown network device		

192.168.0.156			en0	ICMP reply	38.860	false	Unknown network device		
192.168.0.201			en0	ICMP reply	0.107	false	This Mac	5000/Synology DSM HTTP / Web service	Address belongs to the Mac running this report.
224.0.0.251	mdns.mcast.net		en0	Detected		false	Unknown network device		
239.255.102.18			en0	Detected		false	Unknown network device		

Subnet Scan Results

Subnet	Network	Broadcast	Host capacity	Addresses tested	Ping responsive	Status
192.168.0.0/24	192.168.0.0	192.168.0.255	254	254	5	Scanned

Local Mac

Computer	User	Model	Identifier	Chip	Memory	Operating system
Vijaysinh's Mac mini	vijaysinhpuwar	Mac mini	Mac16,11	Apple M4 Pro	24 GB	macOS 26.3.1 (Build 25D771280a)

Network Adapters

Hardware port	Device	Status	Media	MAC address	IPv4	Gateway	DNS
Ethernet	en0	active	autoselect (1000baseT <full-duplex,flow-control,energy-efficient-ethernet>)	██████████	192.168.0.201	192.168.0.1	192.168.0.1
Ethernet Adapter (en5)	en5	inactive	none	██████████			
Ethernet Adapter (en6)	en6	inactive	none	██████████			
Ethernet Adapter (en7)	en7	inactive	none	██████████			

USB 10/100 LAN	en8	inactive	autoselect (none)	[REDACTED] 0			
Thunderbolt Bridge	bridge0	inactive	<unknown type>	[REDACTED]			
Wi-Fi	en1		autoselect (none)	[REDACTED]	169.254.189.8		
Thunderbolt 1	en2	inactive	autoselect <full-duplex>	[REDACTED]			
Thunderbolt 2	en3	inactive	autoselect <full-duplex>	[REDACTED]			
Thunderbolt 3	en4	inactive	autoselect <full-duplex>	[REDACTED]			

IPv4 Routing Table

```

Interpretation and Limitations

- Device type is an evidence-based estimate from addresses, names, gateways, and common TCP ports; it is not authenticated operating-system identification.
- A Mac connected behind a second double-NAT router can reveal that router's internal subnet even when the Windows PC cannot. Run this script on a Mac connected to each router for the best combined perspective.
- Offline, sleeping, firewall-filtered, guest-network-isolated, Wi-Fi client-isolated, or IPv6-only devices may not appear.
- The script reports reachable services but does not determine whether software is patched or vulnerable.

Files in this report package: PDF, HTML, CSV device inventory, JSON data, text report, and scan log.
