Executive Summary

Duration	Default interface	Mac IPv4	Default gateway	DNS	Port scan enabled
29 seconds	en0	192.168.0.8	192.168.0.1	192.168.0.1	True

Discovered Device Inventory

IP address	Host name	MAC address	Interface	Reachability	Ping	Gateway	Likely device	Open TCP services	Notes
192.168.0.1		24:2F:D0:BD:EC:4	en0	ICMP reply	1.135	true	Router / default gateway	53/DNS; 80/HTTP; 443/HTTPS	Configured as the default gateway on this Mac.
192.168.0.8		20:A5:CB:C8:58:14	en0	ICMP reply	0.375	false	This Mac	5000/Web service / Synology DSM HTTP	Address belongs to the Mac running this report.
192.168.0.52		DA:74:E2:87:53:46	en0	ICMP reply	154.392	false	Unknown network device		

192.168.0.56		18:C0:4D:EE:C6:13	en0	ARP / neighbor detected		false	Unknown network device		Host appears online but may block ICMP ping.
192.168.0.107		58:C5:87:A5:E5:97	en0	ICMP reply	0	false	Unknown network device		
192.168.0.228		8C:90:2D:F2:2E:B	en0	ICMP reply	4.255	false	Network host with TCP services	80/HTTP	
192.168.0.242		90:9:D0:65:75:38	en0	ICMP reply	0.587	false	Synology NAS or DSM web device (likely)	22/SSH; 80/HTTP; 139/NetBIOS; 443/HTTPS; 445/SMB; 5000/Web service / Synology DSM HTTP; 5001/Synology DSM HTTPS; 6690/Synology Drive	
192.168.0.255		FF:FF:FF:FF:FF:FF	en0	ARP / neighbor detected		false	Unknown network device		Host appears online but may block ICMP ping.

Subnet Scan Results

Subnet	Network	Broadcast	Host capacity	Addresses tested	Ping responsive	Status
192.168.0.0/24	192.168.0.0	192.168.0.255	254	254	6	Scanned

Local Mac

Computer	User	Model	Identifier	Chip	Memory	Operating system
Vijaysinh's Mac mini (2)	vijaysinhpuwar	Mac mini	Mac14,12	Apple M2 Pro	16 GB	macOS 26.5.1 (Build 25F80)

Network Adapters

Hardware port	Device	Status	Media	MAC address	IPv4	Gateway	DNS
Ethernet	en0	active	autoselect (1000baseT <full-duplex>)	██████████	192.168.0.8	192.168.0.1	192.168.0.1
Ethernet Adapter (en6)	en6	inactive	none	██████████			
Ethernet Adapter (en7)	en7	inactive	none	██████████			

AX88179A	en9	inactive	autoselect (none)				
Ethernet Adapter (en8)	en8	inactive	none				
Ethernet Adapter (en10)	en10	inactive	none				
Thunderbolt Bridge	bridge0	inactive	<unknown type>				
Wi-Fi	en1	inactive	autoselect				
Thunderbolt 1	en2	inactive	autoselect <full-duplex>				
Thunderbolt 2	en3	inactive	autoselect <full-duplex>				
Thunderbolt 3	en4	inactive	autoselect <full-duplex>				
Thunderbolt 4	en5	inactive	autoselect <full-duplex>				

IPv4 Routing Table

Interpretation and Limitations

- Device type is an evidence-based estimate from addresses, names, gateways, and common TCP ports; it is not authenticated operating-system identification.
- Running the scan from both Windows and macOS improves visibility because sleeping hosts, local firewalls, and cached neighbor information can produce different results from each computer.
- Offline, sleeping, firewall-filtered, guest-network-isolated, Wi-Fi client-isolated, or IPv6-only devices may not appear.
- The script reports reachable services but does not determine whether software is patched or vulnerable.

Files in this report package: PDF, HTML, CSV device inventory, JSON data, text report, and scan log.
